

SV2

Hospital Bed

Customisable to fit your needs

Versatility is its greatest feature

At Stryker, creating a hospital bed like our SV2 takes collaboration. By working together with medical professionals like you all over the world, we are delivering a high quality bed you can customise to your specific needs.

Mobile headboard

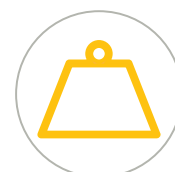

Allows more ergonomic positioning for caregivers and enhanced patient benefits in any bed position.

Intergrated control panels

The intuitive controls offer great functionality to both caregiver and patient in any bed position.

Double regression

Allows 89 mm backrest and 39 mm knee gatch regression to help reduce both sacral pressure and displacement of the patient.

250 kg safe working load

10 year life expectancy

IEC 60601-1-2:2014

Low bed indicator

“Always on” under bed light

Enhances patient visibility during the night when exiting the bed, helping to prevent falls.

Fifth wheel

Fifth wheel mobility enhances the manoeuvrability of the bed, helping to reduce the risk of caregiver back injury.

The fifth wheel allows the bed to go in a straight direction and facilitates mobility in small spaces.

Fold down siderails

Simplifies patient exiting, enhances patient safety by fully covering and minimising entrapment gaps, and ease of use for caregivers who can tuck away the siderails with only one hand.

The SV2 hospital bed successfully combines form and function to enhance the well-being and comfort of patients while helping caregivers work efficiently.

Always keeping patient and caregiver safety at the forefront:

Low bed indicator

The low bed indicator clearly indicates when the bed is in its lowest position, helping to reduce the risk of patient injury from falls.

During the night, caregivers have a clear overview of the beds so they can ensure that all are in their lowest position.

Smart egress

Our focus is to prevent patient falls. The smart egress function raises the backrest and brings the bed surface to its easiest exiting height. Patients can exit the bed with support from the safety siderail.

Safety siderails

Patient safety is our number one priority.

The SV2 fold down siderails facilitate patient exiting and enhance safety by fully covering the mattress base.

The siderails can be lowered individually with just one hand.

The design minimises entrapment gaps and allows easy and profound cleaning.

Integrated siderail controls

The SV2 is equipped with dual siderail controls so both patient and caregiver can easily operate the bed.

The nurse facing siderail unit allows caregivers to lock patient controls and use the electronic CPR function in case of an emergency.

Patient pendant

Every patient deserves to be in the most comfortable position.

The patient pendant allows patients to easily adjust the bed position to their needs.

Nurse control unit

Healthcare professionals require flexibility to move around the bed and give their patients the required care.

The nurse control unit allows control of the bed from different locations.

Equipped with electronic CPR functionality, Trendelenburg, anti Trendelenburg and examination position, care for your patients can be provided from different locations.

The one-touch controls allow patients and caregivers to easily adjust bed positioning, thus eliminating the need for manual labour.

Offers an ergonomic design to both patients and caregivers.

The SV2 hospital bed is built to be a versatile bed for any hospital by considering the needs for both efficiency and safety.

It is fully adjustable for both the caregiver's ease of use and the patient's comfort.

The great range of height adjustment, 37 to 75 cm, brings the bed close to the ground to prevent patients from falling and supports an ergonomic working position for the caregivers.

Taller patients benefit from a bed extender, extending the bed with an additional 31 cm.

The associated linen tray is a built-in storage unit located at the footboard, that can store patients' clothes, laundry and the nurse control unit at the footboard.

The 5th wheel provides enhanced steering and turning, potentially reducing the risk of caregiver back injuries and particularly useful in confined spaces.

The mobile headboard allows a more ergonomic working position for caregivers. The head and footboard are easily removable to allow a caregiver quick access to their patient.

CPR levers are located on both the left and right side of the backrest. The levers are easily accessible with raised as well as lowered siderails.

Activating the CPR release positions the bed at 0°, necessary for effective CPR.

The always-on under bed light enhance patient visibility when getting out of bed at night, helping to prevent patient falls.
