

Cervical Spine Solutions

Stryker education

Didactic and Cadaveric Lab training on:

Advances in technologies and techniques

The goal of this course is to provide training and education in the safe and effective use on the latest cervical spine systems.

The course will focus on posterior fusion techniques, with various screw-rod systems, vertebrectomies with in situ distractable vertebral body replacements and anterior plating as well as Imaging and Navigation with the latest Stryker Enabling Techniques equipment.

Find out from international top surgeons which treatment algorithms they trust and how they deal with complications that arise.

Participate in this highly interactive course, and benefit not only from interesting lectures, but also get involved in varied, exciting case discussions.

Practice using the latest technologies and techniques on high quality human donations under the guidance of the surgical experts and receive first-hand tips and tricks.

Save the date!

March 16th & 17th 2023
