

Journey to

Zero

healthcare worker injuries

Invest in your staff – deliver for your patients

Nurses are at the frontlines in the battle to provide the best possible patient care. But they're overworked, stressed, and hurting. Many are leaving the profession altogether and those years of wisdom and experience can't be replaced. It doesn't have to be this way.

1.8 tons

is lifted by the average nurse every day¹

52%

of nurses suffer chronic back pain according to an ANA survey²

36%

of hospitals reported an RN vacancy rate exceeding 10%³

48%

of caregiver injuries are caused by overexertion or bodily reaction often related to patient handling⁴

Pain shouldn't be part of the job

Building a culture of safety for nurses starts by reducing injury risk. Our goal is to achieve zero harm for healthcare workers – which helps improve retention rates and outcomes and makes hospitals a safer place for everyone.

“ If we're not going to commit to zero harm now, then when? And if we're not going to do it, who will do it?... If not us, then who? ”

Mark R. Chassin, MD, FACP, MPP, MPH
President and CEO, The Joint Commission⁵

Let's start the Journey to Zero— together

We're committed to actively partnering with your facility to reduce the risk of patient handling injuries and improving outcomes.

In addition to our quality products, we also offer a range of services:

Assessments and benchmarking

Ongoing education and leadership workshops

Utilization and outcome tracking
